Brett, the owner of a local small restaurant, is踝 overjoyed. He has just been featured in a travel magazine for his unique culinary creations, and the article has generated a surge in visitors to his establishment. Brett is excited about the increase in business, but he is also feeling a bit overwhelmed.

To manage the influx of customers, Brett decides to expand his seating area. He plans to build a new patio with seating for 20 people. However, he needs to ensure that the new patio meets local building codes and regulations. He contacts a local contractor to help with the planning and construction.

The contractor explains the requirements for building a patio in Brett's area. Brett needs to consult with the local planning department to obtain a permit and ensure that the patio design complies with local zoning laws. Additionally, he must ensure that the patio meets safety and accessibility standards.

Brett is pleased with the contractor's expertise and looks forward to the completion of the patio.
